COURSE DESCRIPTION: This course examines the effects of group characteristics, social behavior and social organization on the causation, amelioration and prevention of mental and physical illness.

PURPOSE OF COURSE: The purpose of this course is to introduce you to a sociological perspective of the study of health and illness. A major goal of this course is to provide the conceptual tools needed to understand the social and cultural dimensions of health and disease, in addition to the biological factors. Among the questions we will explore are: How is the risk of illness, injury, and other health problems related to social characteristics and contexts? What issues will shape the future of population?
**COURSE GOALS AND/OR OBJECTIVES:** The goal of the course is to understand how health and illness are connected to social behavior and the organization of society.

By the end of this course, students will be able to:

- Articulate the complementary nature of sociological and biomedical approaches to health
- Describe the ways that population health is measured
- Explain historical changes in population health
- Discuss the causes and consequences of population aging
- Describe the effects of inequality on health
